Sanei, Arezoo (Ed.)

Research and Management Practices for Conservation of the Persian Leopard in Iran

- The first introduction to innovative models that predict leopard persistence on the basis of the current potential range in Iran in relation to cumulative effect of land use and land cover variations
- Predicts landscape corridors to improve leopard distribution pattern connectivity in a metapopulation scale
- Proposes species-specific threshold levels for land use and land cover variations affecting habitat suitability rates
- Provides first-hand analysis of Persian leopard research, covering the years 2007 to 2011 with a comparison between these years and leopard status from 2002 to 2006
- Develop new research practices to create the regional and countrywide

The population of the Persian leopard (*Panthera pardus saxicolor*) has drastically declined; this Asian leopard subspecies has disappeared from some parts of its former range. Containing large areas of potential habitats with leopard presence across almost all of its provinces, Iran is known to be the last stronghold for the Persian leopard in the region.
